

WHAT IS CLAIMED IS:

CIK		1.	A mobile computing system comprising of:			
20		a comi	munication device;			
² \(\right\)		a perso	onal computing system (PC) comprised of			
4		•	a storage device capable of receiving and storing messages from the			
5			communication device; and			
6		a perso	onal digital assistant system (PDA) comprised of			
7			a storage device capable receiving and storing messages from the			
8			communication device, whereby the storage device of the PC is capable of			
9			synchronizing received messages with the storage device of the PDA.			
1		2.	The mobile computing system of claim 1 wherein the storage device of the PC			
2	2 is a memory array comprised of a set of records, and the storage device of the PDA is a					
3	memo	ry array	comprised of a set of records.			
1		3.	The mobile computing system of claim 2 wherein a direct correspondence is			
2	establi	shed be	tween the set of records of the PC memory array and the set of records of the			
3	PDA n	nemory	аттау.			
1		4.	The mobile computing system of claim 2 wherein messages are synchronized			
2	betwee	en the m	nemory array of the PC and the memory array of the PDA.			
1		5.	The mobile computing system of claim 3 wherein messages are synchronized			
2	betwee	en recor	ds of the PC memory array and records of the PDA memory array.			
1		6	The mobile computing system of claim 1 wherein the storage device of the PC

Client Reference No.: DC-02758mpk

is a hard disk drive.

2

1	7. The mobile computing system of claim 6 wherein the hard disk drive is
2	comprised of a memory array, and the PDA storage device is comprised of a memory array,
3	wherein the PC hard disk drive memory array corresponds directly to the PDA memory array
1	8. A mobile computing system comprising of:
2	a communication device;
3	a personal computing system (PC) capable of receiving messages through the
4	communication device; and
5	a personal digital assistant system (PDA) capable of receiving messages through the
6	communication device and synchronizing the messages with the PC.
1	9. The mobile computing system of claim 8 wherein the PDA is further
	comprised of a memory array where messages are received and entered, and the memory
3	array is synchronized to the PC.
1	10. The mobile computing system of claim 9 wherein the PC is further comprised
	of a memory array that is synchronized to the memory array of the PDA. 11. The mobile computing system of claim 9 wherein the PC is further comprised
1	11. The mobile computing system of claim 9 wherein the PC is further comprised
2	of a hard disk drive that is synchronized to the memory array of the PDA.
1	12. A method of clearing and archiving messages in a dual system computer
2	architecture comprised of:
3	receiving and storing messages by a first computer system to a first memory device;
4	synchronizing the messages with a second computer system, whereby the second
5	computer system archives synchronized messages to a second memory device
6	and
7	deleting synchronized and archived messages whenever the first memory device is
8	filled.

1	13.	The method of clear	ng and archiving messages in a dual system computer
2		architecture of claim	12 further comprising:

identifying the deleted messages in the first memory devices.

- 14. The method of clearing and archiving messages in a dual system computer architecture of claim 12 wherein the first computer system is a personal digital assistant system (PDA) and the second computer system is a personal computer system (PC).
- 15. The method of clearing and archiving messages in a dual system computer architecture of claim 13 wherein the first computer system is a personal digital assistant system (PDA) and the second computer system is a personal computer system (PC).
- 16. A method of clearing and archiving messages in a dual system computer architecture comprised of:

receiving and storing messages by a first computer system to a first memory device; synchronizing the messages with a second computer system, whereby the second computer system archives synchronized messages to a second memory device; and

informing a user whenever the first memory device is filled.

- 17. The method of clearing and archiving messages in a dual system computer architecture of claim 14 further comprised of:
 - deleting messages from the first memory device after the messages have been read by the user.
- 18. The method of clearing and archiving messages in a dual system computer architecture of claim 16 wherein the first computer system is a personal digital assistant (PDA) and the second computer system is a personal computer system (PC).
- 19. The method of clearing and archiving messages in a dual system computer architecture of claim 17 wherein the first computer system is a personal digital assistant (PDA) and the second computer system is a personal computer system (PC).
